

THE EXPERIENCES OF CHILDREN PARTICIPATING IN ORGANISED SPORT IN THE UK

“I really think at that age there should not have been that much pressure. I should have been a child.”

Young woman: district level gymnastics, local level equestrian sports

HEADLINE FINDINGS

Overall, participating in **organised sport is a positive experience** for most children and young people. However a **negative sporting culture exists**, is accepted as ‘the norm’ and is perpetuated by peers, coaches and other adults.

Young people in the study reported **widespread emotionally harmful treatment** (75%) and **unacceptable levels of sexual harassment** (29%). Clothing and body image are key issues within sport contexts particularly around puberty and warrant further attention. Self-harm was reported equally by both boys and girls (10%). Reports of sexual harm featured at a low level (3%).

Peers were the **most common perpetrators** of all forms of harm reported in the research, with **coaches sometimes failing to challenge it effectively**. **Coaches** were the **second most common perpetrators** of harm with their role in harm increasing as young athletes advanced through the competitive ranks.

This short paper distills key themes from the research report *The experiences of children participating in organised sport in the UK* (Kate Alexander, Anne Stafford, Ruth Lewis. 2011). This research was commissioned and funded by NSPCC and conducted by researchers at The University of Edinburgh/NSPCC Child Protection Research Centre.

1. OVERVIEW: WHAT IS THIS STUDY? WHY DID WE DO IT?

This study is concerned with children's safety within the community setting – in particular, children and young people's experiences of organised sport¹ in the UK. While the family is the setting for most maltreatment and abuse of children, physical abuse, emotional abuse and sexual abuse, are all experienced outside the family in other settings (Cawson et al., 2000). Given the number of children and young people engaged in organised sport in the UK (Sport England, 2005) it is important to examine negative and harmful experiences of children in this setting.

The benefits to children of participating in sport are well known and documented and include enhancement of self confidence and self-esteem, physical and mental health, and well-being (Scottish Executive, 2003). Research examining the range of negative experiences that may be faced by children across sports and at all levels of participation is limited, as is research in the UK focusing on children's and young people's views about these experiences.

This study was commissioned to **provide additional information about the nature and range of these negative experiences and harms**. The three year study (2007–2010) included two main elements: an online survey of over 6000 students² (aged 18–22) exploring their experience and retrospective views of participating in organised sport as children (up to 16yrs); and, 89 in-depth telephone interviews with young people who identified themselves in the online survey as having experienced some harm in sport and were willing to be interviewed.

The research **provides important information for those involved in decision making in sport**, particularly to **assist in the development of policy about child abuse in sport**.

The young people participating in this research were reporting on their experiences which, in the main, took place prior to new national standards and frameworks³ being established in each of the four nations. This implies a need for further research to determine the impact of these standards and frameworks.

1 **Organised Sport:** Organised sport was defined in the study as sport that is voluntary, takes place outside school hours and includes an element of training or instruction by an adult. It did not include PE and informally arranged sport such as 'kick-about' with friends. It did include extra-curricular sport at school, for example playing in the school team or being part of a club, based at school but taking place outside ordinary PE lessons.

2 73% female; 27% male; with most young people from a slightly higher social-economic group than the population as a whole.

3 The Child Protection in Sport Unit (CPSU) (established in 2001) is a partnership between the NSPCC, Sport England, Sport NI and Sport Wales. Its counterpart in Scotland is the Safeguarding in Sport Service, a partnership between Children 1st and sportscotland. These organisations work with governing bodies and other organisations to minimise risk to children in sport. An important output of these partnerships has been **the development of national standards or frameworks for each of the home nations, setting out good practice in safeguarding and protecting children in sport**. http://www.nspcc.org.uk/Inform/cpsu/cpsu_wda57648.html

2. FINDINGS: WHAT DID WE LEARN?

OVERVIEW

In the main, **young people painted a positive picture of sport participation**. However sitting alongside the considerable benefits of participating in sport were **a range of more negative and harmful experiences**. Overall the study highlights worrying levels of emotionally harmful treatment and unacceptable levels of sexual harassment. It highlights that most of the harm experienced by participants was non-physical (verbal bullying, negative comments, being shouted at, humiliated etc.). Both physical and sexual harm was reported – in only a very small number of cases was this at levels that would be considered ‘serious sexual or physical abuse’.

While experience of harm **occurs at every level of sport**, there is a tendency for it to increase with level of participation. To a great extent all of these experiences tended to be **accepted as normal** by young people and ‘just what happens in sport’. It provides some evidence of a sporting culture which accepts and condones disrespectful and negative treatment among young people and between young people and coaches.

Table 1: Experiences of various types of harm in main or second sport, by gender

| | All | Male | Female |
|-------------------|------|------|--------|
| Emotional harm | 75% | 77% | 74% |
| Self harm | 10% | 9% | 10% |
| Sexual harassment | 29% | 17% | 34% |
| Sexual harm | 3% | 5% | 2% |
| Physical harm | 24% | 26% | 23% |
| Total | 100% | 100% | 100% |
| Total (n) | 6060 | 1634 | 4426 |

EMOTIONAL HARM, BODY IMAGE AND SELF HARM

Disrespectful and emotionally harmful treatment of young people was common in children’s experiences of sport in the UK. For some this included being criticised about performance in ways that could be disproportionate or unhelpful, being humiliated, teased, sworn at or bullied. While it occurred mainly between team mates and peers, a third of those reporting it said coaches were involved, either participating directly, or indirectly by creating an ethos where such behaviour was condoned or not effectively dealt with.

Most young people reported that the impact of participating in sport on their **body image** had been positive. However, for young people going through puberty, the focus on the body in sport can lead to complex and difficult issues. Young women often described general self-consciousness about their bodies which was intensified by sport clothing – short gym skirts,

leotards and swimming costumes were frequently mentioned. This kind of self-consciousness could also affect boys. Revealing sports clothing and an emphasis on weight and diet can, for a minority of young athletes, lead to emotional and physical harm. Coaches had a role in directly setting diet and exercise plans, in scrutinizing and being aware of young people's weight and appearance, in not understanding the possible effect of this behaviour on young people's developing identities, and in not challenging a culture where being the perfect weight and having the right appearance was highly important to young people. 11% of participants had a special exercise plan to reach their perfect weight, 5% reported having become anorexic or bulimic – issues more common in performance sports such as gymnastics and dance.

An equal proportion of boys and girls (10%) reported some experience of **self-harm** in their main or second sport, although the specific self-harming behaviours differed by gender. Some attributed the onset of these behaviours entirely to sport, for others the roots of self-harming lay elsewhere, but took on a particular flavour in the context of sport. For almost all those reporting self-harm at interview, there was an association with negative self and body image. Some attributed these behaviours to the pressures of training and competition, where self-harming could provide a feeling of control for some young people in situations where they felt powerless.

SEXUAL HARASSMENT

Sexual harassment was the second most common form of harm reported in the survey, experienced by 29% of respondents. Most of this was non-physical sexual harassment (sexist jokes, being whistled or leered at, etc.) and two thirds of it came from peers. Coaches were also perpetrators (21% of those experiencing sexual harassment in their main sport) as were spectators and passers-by. Some people could 'laugh off' sexual harassment but others experienced it as undermining and difficult. Sexualised bullying was a relatively common occurrence in some sports, notably rugby, football and to some extent swimming. This may be a particular problem for young gay people. On the whole coaches and others adults did not deal with sexual harassment effectively.

Some young people mentioned feeling uncomfortable when they were touched by coaches during instruction. They felt this could be done in a rather disrespectful way often without seeking young people's permission. Several young people reported incidents which made them feel uncomfortable and confused (at the time, and for some, in retrospect) about whether something inappropriate had occurred or not.

SEXUAL HARM

Most of the sexual harm reported in the survey took place in the form of sexualised behaviour between boys, mainly involving exposing and flashing between peers. While at this time this was shrugged off by young people as 'boys being boys', on reflection it could be viewed differently, with young people expressing the view that more could have been done by adults involved in their sports to prevent it happening.

PHYSICAL HARM

Most of the physical harm reported by participants related to being **forced to train while injured or exhausted**. Young people in this study threw light on the way children come to accept a culture where training through discomfort, injury and exhaustion is seen as normal. Sometimes coaches were unaware of the effect of overtraining, with young athletes unable to speak up. Young people also reported some **aggressive and violent treatment**. Coaches were sometimes responsible. Mainly this was punitive, born out of frustration or anger when dissatisfied with young people's performance. More commonly, aggressive and violent treatment came from peers and took the form of physical bullying in the context of the physicality of sport – some of this being accidental, but there were also reports in team sports of balls and other sporting props being used to deliberately harm others. Many felt that physical aggression was to be expected in sport and was accepted as part of what happened in sport, but sport also provided a more physical context for bullying with sports such as rugby and football sometimes providing the pretext for deliberate tripping, pushing and more serious violence.

3. MESSAGES FROM THE RESEARCH

Sport has achieved a great deal over the past 10 years and made significant progress towards ensuring that children and young people are able to participate in sport safely and enjoyably. However work remains to be done. Findings from this research partly mirror findings from other UK and international studies and highlight areas of concern which sport should address.

General Messages

- Sport should focus more on a children's rights approach to sport participation; and greater attention should be paid to creating a positive sporting ethos where children and young people are respected, and where their voices are heard and used to shape sporting experience, welfare and performance
- Sport should build on what children and young people value about sport participation. This includes the social aspects of sport such as making friends and being part of a team.
- Sport should take steps to promote a more positive sporting and coaching ethos, at all levels of participation and in all sports
- Sports bodies should put in place policies, procedures, training and practice which enable sport practitioners to systematically tackle harm occurring between peers
- Sports bodies should use the findings and messages from the research to shape an examination of the culture in their own sport and address short-comings.

Messages for Coaches, Coach Educators, Coach System Builders and Other Adults Involved in Delivering Youth Sport

- Coaching systems should integrate the messages from the research into coach education
- The new coaching children curriculum and the development of delivery options should take account of the findings from the research
- Sport should address the findings from the research that while harm to children occurs at every level, it tends to increase with performance level. This provides a clear mandate for further development of information and training to support coaches understand the welfare and emotional needs of young athletes in their care.
- Coach education should take account of the findings from the research that most of the harm reported occurred between young people themselves, that this tended to be expected and accepted by them as normal, and that it was ineffectively challenged by coaches'

- Information should be made available to those who work with young people in sport to support them in recognising and addressing young people's self harming behaviours in the context of sport
- Sport should provide information to help address behaviours which support gender stereotyping, appreciating that this can lead to sexually harassing behaviour between peers which young people can find distressing
- Information should be provided for coaches about the positive role they can play in modeling positive behaviour in a way that can help shape young people's behaviour in future.

Messages for Parents

- Sport should provide information to parents about how they can best positively support their children's sport participation.

Messages for Children

- Children and young people need to be made fully aware of their rights to participate in sport in a safe environment
- Bullying prevention should become a focus for the coming years and young people should be involved in developing resources and programmes to tackle bullying and violence between young people in sports contexts.
